

XM Satellite Radio weather and traffic has been an asset to me for the past two months since I purchased the service. Unlike normal FM stations, XM is commercial free which enables information to be constantly broadcast. Also, I am able to hear XM everywhere I go, unlike FM stations which are limited to a certain broadcast area. People should have the right to choose how they would like to get news, traffic, and weather and should not be limited by a group that is concerned with competition.
